*S*uper Star™
Multi-User
Computer System

Advanced Digital Corporation's Super Star is the ideal system for small, stand-alone and multi-user business, professional and educational applications. Its Turbo-DOS Operating System provides access to a vast library of readily available applications software programs. The 6-Slot motherboard offers room for expansion.

Adding additional users is easy. Simply plug in an **Advanced Digital** Super Slave processor board for each user (up to 12) and install the multi-user TurboDOS Operating System. TurboDOS is used because of its unique architecture of "building block" modules. These modules can be combined to produce a family of compatible operating systems including single-task, multi-task, and networking. **Advanced Digital's** implementation of TurboDOS includes an advanced failure detection and recovery facility that makes the Master/Slave network almost crashproof.

Standard Features:

- New slim-line cabinet
- 5¼" 25 MByte Winchester Disk Drive
- 5¼" Half-high Floppy Disk Drive
- 6-Slot motherboard (S-100, IEEE 696 standard)
- 12 User-System
- TurboDOS Multi-user Operating System
- Slave Processor, Z 80B, 6 MHz, 128 KB RAM, 1 Serial Port Standard

Options:

- Network-OS Operating System with built-in access manager and MS-DOS capability
- DMA 11/11, 10 MB Fixed/10 MB removable Cartridge Winchester Hard Disk Drive
- Expandable to 12 Users
